How the role of CFO is changing P3

2

Proving your Revenue Model is working P4

3

Key signs Quickbooks is holding you back P5

4

5 essential features you need in your next Subscription Management Solution P6-15

From managing your subscriptions, proving your revenue model, and keeping on top of churn, to updating your team with real-time reports and forecasting the future, these are the five essential software features every SaaS CFO needs for success

5

Case Study – Sales hood doubles CLTV with ASC 606, while adding SaaS Metrics dashboards P17

6

A look at the #1 rated Subscription Management Solution P19

# The Role of CFO is changing, creating compelling new opportunities

Traditionally 80% of CFO jobs were tactical - with automation, CFOs can now spend 80% of their time on strategy

**DECISION-MAKING**

**76%**

**76%** of financial decision-makers play the lead role in their organization's adoption of digital transformation<sup>1</sup>

**FACING NEW DEMANDS**

**46%**

**46%** are faced with new demands to provide a higher level of business counsel and manage heightened expectations for improved insight<sup>1</sup>

**DISCOVERY**

**90%**

**90%** Believe that technology can help discover new opportunities and risks with better forecasting, automated period-end closes, stronger data governance, and an enhanced customer experience<sup>1</sup>

CFOs need data every day, not just after the close, in order to make strategic decisions on pricing, customer churn, revenue growth, hiring, investments, partnerships, and lead gen.

<sup>1</sup> CFO 3.0 –Digital Transformation Beyond Financial Management, Sage Intacct

# Your board and investors need you to prove your revenue model is working

Once you've demonstrated product market fit, you need to show you can efficiently and consistently scale sales by:

1. Continuing to grow committed monthly recurring revenue
2. Acquiring new customers at a reasonable cost relative to customer lifetime value
3. Keeping customers from churning
4. Getting them to buy more from you as they grow

Investors look to CFOs to track and manage the health of their subscription business using SaaS Metrics - CMRR, customer acquisition costs, Churn, CLTV, and Cash Flow.

# Don't let Quickbooks hold you back

QuickBooks is a great bookkeeping solution for small, order-centric businesses. But when your subscription business has a variety of billing models or recurring revenue, you'll start to feel growing pains as invoices and revenue schedules increase.

Here are key signs you've outgrown Quickbooks:

## Manual billing

"With 200 recurring invoices a month, we're at the breaking point with manual billing"

## Inflexible billing

"We need to innovate our pricing, but we can't scale it"

## Revenue in spreadsheets

"With 2,000 revenue schedules, my best team member spends all her time calculating revenue recognition in spreadsheets and manually updating our general ledger"

## Delayed reporting

"I pulled an all-nighter (again!) putting together reports for investors"

## Challenging forecasts

"We can't efficiently predict our cash to manage operations and invest to drive growth and beat our competitors"

# What to look for in your next subscription management solution

The 5 essential capabilities and features every SaaS CFO needs to lead their business

**Integrated systems for quote-to-cash**

Increase revenue per transaction

**Flexible contract-based billing**

Reduce gross revenue churn

**End-to-end revenue management**

Reduce the financial close

**Real-time SaaS and GAAP dashboards**

Higher valuation and investor confidence

**Ability to forecast and plan the future**

Speed quote-to-cash processing

# Integrated **Quote to Cash**

**What to look for:**

The ability to integrate your CRM and Subscription Management Solution bi-directionally

**What you are fixing:**

Eliminating manual, time-consuming, error-prone processes between your CRM and Subscription Management Solution

- ✓ Inability to scale manual quote to cash process
- ✓ Spending too much time re-entering orders from SFDC to Quickbooks
- ✓ Re-entering contract changes and renewals
- ✓ Manually calculating usage billing
- ✓ Billing errors that impact days sales outstanding and cash flow
- ✓ Poor customer experience that can lead to churn
- ✓ Billing manually entered in to Quickbooks
- ✓ Constant need to refer to different sources of record

## How integrated quote to cash helps:

A robust, pre-built, cloud-native integration between Salesforce and CPQ to your subscription management solution to create one system of record across quote to cash with the contract master

## Key Benefits:

- ✓ A bi-directional integration between Sales and Finance platforms means less re-keying
- ✓ One system of record across the entire customer lifecycle
- ✓ A single contract between Sales and Finance that streamlines the initial sale as well as renewals and add-on business
- ✓ Accelerates QTC up to 75%
- ✓ Provides sales visibility into invoices and payments
- ✓ Converts Salesforce quotes into orders with a single click
- ✓ Advanced CRM Integration that is pre-built on the Salesforce platform

## Flexible contract-based billing

### What to look for:

Automated, subscription-centric billing to see revenue, billings and financials in one spot – through the contract. Also, built-in support to handle more complex usage-based subscriptions as well as renewals, upgrades, downgrades, cancellations, hybrid models, services, maintenance and other common entries that make subscription billing difficult for order-based systems.

### What you are fixing:

- ✓ Moves you off inflexible order-centric billing which prevents you from scaling recurring, usage-based, or complex billing
- ✓ Eliminates painful, tactical, non-strategic, error-prone manual work – including sales reps creating custom billing structures
- ✓ Improves trust and confidence in the data

## How flexible contract-based billing helps:

Get bills out faster, decrease days sales outstanding, and free up cash to grow your business

### Key Benefits:

- ✓ The ability to handle different types of revenue streams and billing provides more flexibility to innovate, differentiate and maximize CLTV
- ✓ Support a blend of models across subscription pricing, usage billing, professional services, and perpetual licensing
- ✓ Using the contract as the single source for revenue, billing and financials, you can manage a single revenue stream and automatically recognize revenue throughout the customer lifecycle, including renewals, upsells, downsells and holds

### Usage

Usage pricing  
Tiered pricing  
Price / thousand  
Minimum flat fees  
Included units  
Overages  
Customer specific

### SaaS

Subscription  
Non-linear subscriptions

### Perpetual

License  
Maintenance  
Support

### Service

Hours  
Time & Materials  
Fixed price  
Hybrid models

## End-to-end **revenue management**

### What to look for:

End-to-end subscription revenue management with ASC 606 compliant revenue recognition

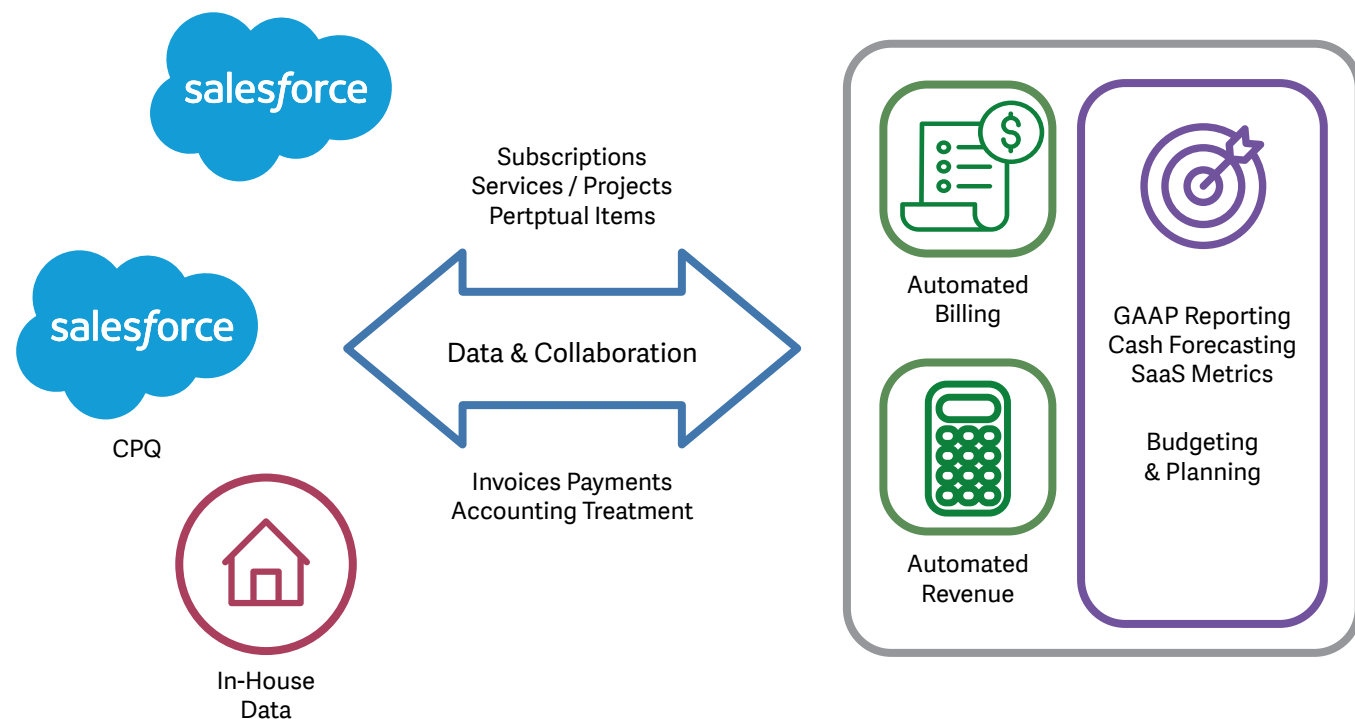

### What you are fixing:

- ✓ ASC 606 compliance including blended revenue models and multi-element arrangements
- ✓ Restating your financials due to errors in revenue recognition caused by error-prone, manual processes
- ✓ Calculating Rev Rec in spreadsheets that cause errors that risk ASC 606 compliance and delay the close
- ✓ Lack of visibility to when revenue will be recognized, what has been billed, and when cash will come in

## Why automated end-to-end revenue management helps:

With a contract based solution, a single view of your revenue recognition across unbilled, billed, and paid comes from a single source, the subscription contract

## Key Benefits:

- ✓ GAAP, ASC 606 and IFRS 15 compliance
- ✓ Automating compliance can save hundreds of hours of time and decrease risk of errors
- ✓ You can handle changes through configuration, not scripting - you don't need to depend on IT or consulting services
- ✓ Unlimited dimensions for detailed insights into product, region, segment, geography, and supporting data
- ✓ Generate investor confidence in financial reporting and the ability to deliver timely financials which translate to higher valuations and better access to credit

# 4

## Real-time SaaS Metrics and GAAP dashboards

### What to look for:

The ability to create and view SaaS Metrics and GAAP dashboards on-demand any time of the month, not just after the close, that provide a true measure of the health of your subscription business

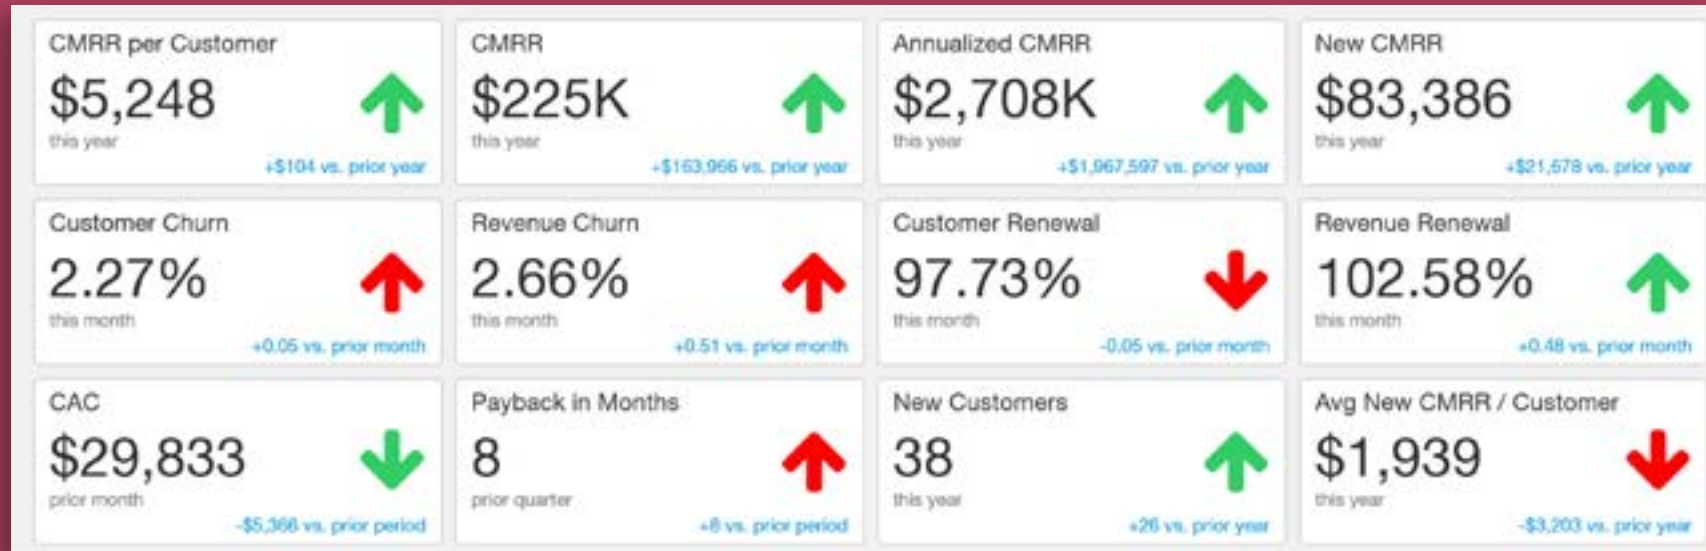

### What you are fixing:

- ✔ Too much time spent manually reviewing and updating spreadsheets (time not spent on strategic business activities)
- ✔ Manual, inaccurate, out-dated views of your business your execs, board and investors want to see
- ✔ Not getting your next round of funding (or getting a lower valuation) because you failed to convince investors your business is healthy and growing
- ✔ Inability to confidently present the 6 Cs of SaaS Metrics

## How Integrated real-time SaaS Metrics and GAAP dashboards help:

Automatically connecting your contractual obligations to billing, revenue management, and the general ledger automates and simplifies the creation of SaaS and GAAP dashboards

### Key Benefits:

- ✔ Track the Six Cs of SaaS Metrics - the fundamental numbers you should be delivering to your investors and board – CMRR, CAC, Churn, CLTV, Cash Flow and Customer Count
- ✔ Run your business more efficiently - grow revenue while keeping CAC manageable, reducing churn and increasing CLTV
- ✔ Higher valuation and investor trust / confidence - it's important to develop a compelling financial story
- ✔ Become a strategic leader - provide insight and advice on pricing, sales, product gaps and customer success
- ✔ Improve visibility into different drivers of your business—customers, products, projects, channels, and more—to perform cohort analysis to find opportunities for growth
- ✔ Build a strong understanding of your growth model, sales efficiency, and economics for FP&A and cash flow scenario planning

## Ability to **Forecast and Plan the Future**

### What to look for:

The ability to forecast the future accurately and on-demand with the click of a button across billing, pricing and revenue.

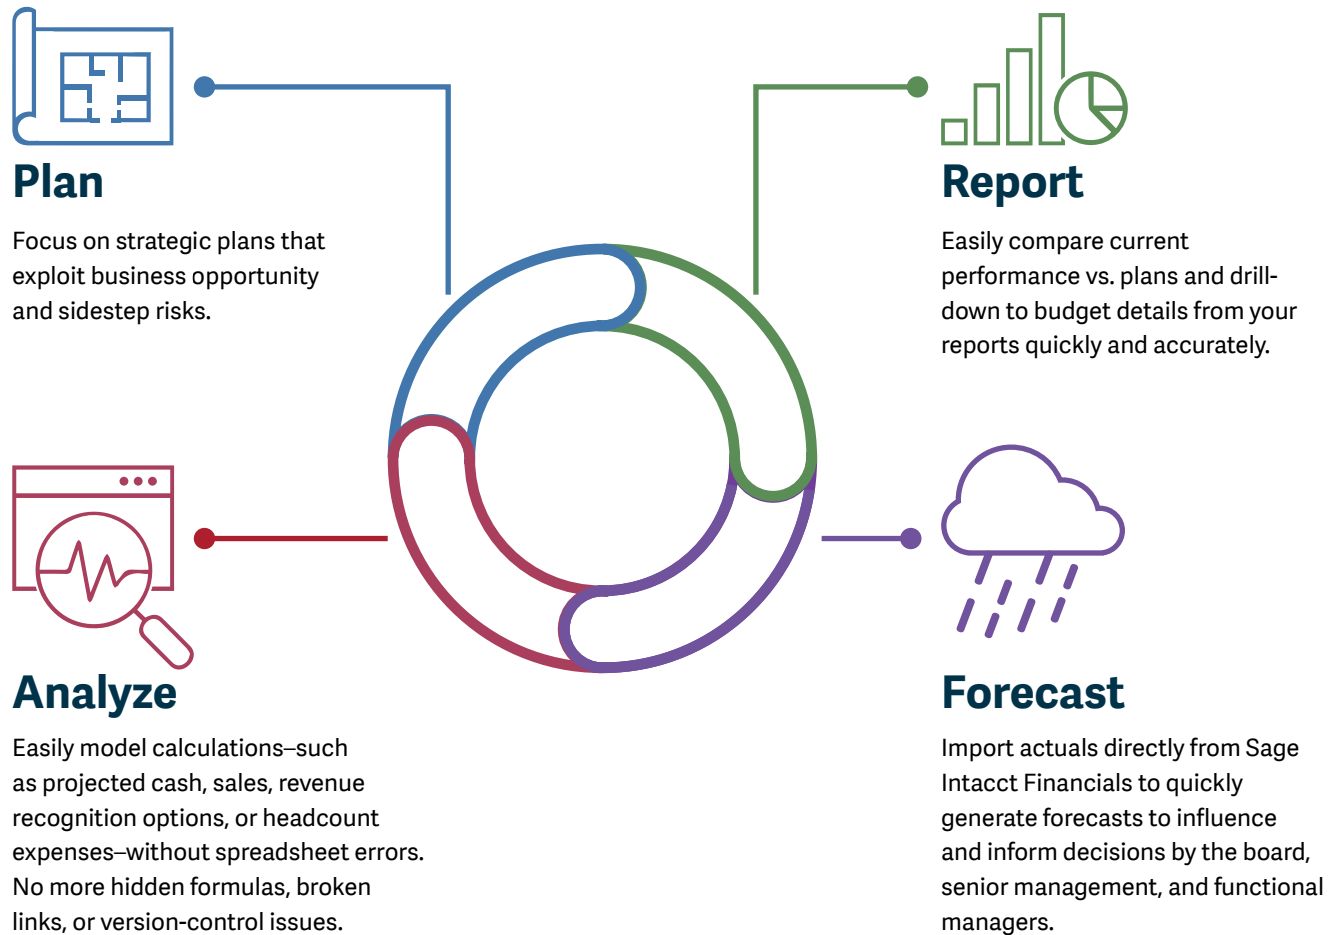

### What you are fixing:

- ✓ The DIY approach - piecing together multiple systems and spreadsheets
- ✓ Inability to forecast recurring revenues over time with order-based solutions
- ✓ Not being able to efficiently predict cash to manage operations and invest in the business
- ✓ Forecasting that happens once a month or quarter instead of continuously anytime it's needed
- ✓ Lack of ability to create financial modeling, what-if scenarios, workforce planning and customizable dashboards

## How forecasting and planning help:

Have a clear picture of your business's financial situation to help adapt to the rapidly changing environment, business loans, or investor funding

## Key Benefits:

- ✔ Compare and model based on actuals. Create any number of scenarios to perform 'what-if' analysis
- ✔ Guide decisions that make your business a success—hiring, product investment, partnerships, acquisitions, and more. You can see asset mix, cash on hand and anything committed in the future
- ✔ When you're connected across CRM, CPQ, and financials via the contract, you can automatically generate forecasts. You get one view of your customers (vs. disparate orders) across billing, revenue recognition, and cash
- ✔ You shift from manually reporting the past in time-consuming, error-prone spreadsheets into accurate, real-time forecasts. You can't afford to lose the confidence of your board and investors with inaccurate data

**CASE STUDY:**

# Saleshood **Doubles CLTV** with Sage Intacct

Saleshood is a SaaS-based sales enablement platform. They were using Quickbooks desktop and were manually tracking orders in spreadsheets and Salesforce. Their reports were delayed and error prone, and they weren't able to forecast and make strategic decisions in a timely manner.

---

**BUSINESS RESULTS** AFTER SWITCHING TO SAGE INTACCT

---

<b>With Sage Intacct</b>	<b>Impact</b>
